

Fundamental Elements to Explain the Stakes of Consciousness and Knowledge: Grothendieck Topoi Applied to Philosophy and Psychology

Notations and Prerequisites

- $\rightarrow$: set-theoretic operator
 - $|->$: elementary operator
 - $\in$: membership symbol
 - Operators represent energies by function (e.g., consciousness)
 - Sets and elements represent energies by nature (e.g., knowledge)
 - Reciprocal operators: given two operators f and g , if $f \circ g = g \circ f = Id$, they are mutual inverses
 - Id : identity operator
 - $\circ$: operator composition
-

First Model

Let C_k be the individual consciousness of individual k , where $k \in \{1; n\}$.

We define:

- C_k : $Cogito \rightarrow Religo$
- being $|->$ entity = $C_k(\text{being})$

And:

- $Dasein_k$: $Awareness \rightarrow Thought$
- $Cogito |-> Religo$

So, for $k \in \{1; n\}$, we have:

- $Religo = Dasein_k(Cogito)$
- entity = $C_k(\text{being}) \in Dasein_k(Cogito)$

Note:

- entity = $C_k(\text{being})$ expresses self-awareness
 - entity $\in Dasein_k(Cogito)$ expresses the existence of collective consciousness
-

Second Model

Let C_k be the individual consciousness of individual k , where $k \in \{1; n\}$.

We define the reciprocal operator:

- Reflection_k: Religo $\rightarrow$ Cogito
- entity = $C_k(\text{being}) \rightarrow \text{being}$

And let Dasein_k be the individual Dasein operator for individual k , then:

- Intuition_k: Thought $\rightarrow$ Awareness
- Religo $\rightarrow$ Cogito

Note:

Dasein_k and Intuition_k represent the same operator at different representational scales.

Similarly, C_k and Reflection_k are reciprocal at the same level, while Dasein_k acts as a meta-operator or super-operator of C_k .

Third Model: Grammatical Identity

- Identity of Cogito
 - = Reflection_k o C_k
 - = C_k o Reflection_k
 - = Identity of Religo
 - = {on}
- Identity of Awareness
 - = Intuition_k o Dasein_k
 - = Dasein_k o Intuition_k
 - = Identity of Thought
 - = {I}

Note:

This final model clarifies the notion of super-operators, where the identity set {I} dominates {on}. The "I" is the starting point of individual consciousness that merges into the collective consciousness "we", becoming the pronoun "on" (French impersonal "one").
