

Philosophical Operators Definitions, Corollaries and Propositions

The Theory of RES equals RAG (Part II)

Definition 18

« On » French is an operator defined by :

On :Life ---> Death
Individual |---> Collective

Remarks : it is the ontological version of One

Definition 19

One is an operator defined by :

One : Individual ---> Collective
I |---> We

Remarks : it is the linguistical version of One and We represents other versions of I if focusing on
the notion of individual Referential

Proposition 20

One is a part of « On » French

Demonstration

Cf. the same type of demonstration as Proposition 11 in the precedent Paper « Theory of RES = RAG in the case of the Black Box of AI QED

Proposition 21

Time is not a dimension ; it is not a Kantian notion a priori

Demonstration

Regarding Definition 11 from the precedent Paper « Theory of RES = RAG in the case of the Black Box of AI, RES by construction is constructed with a temporal structural because of Prompt becoming Bug QED

Definition 22

Space is a perception like Time but is a dimension because of representing with the five senses ; it is the signature of Time

Definition 23

In a Classical view, Individual is observer and actor of the environment but in a Quantum view Individual becomes a part of the environment

Definition 24

Classical represents Life and Quantum Death

Proposition 25

The theory of Chaos means T in an only sense from Classical to Quantum

Demonstration

Definition 18 demonstrates the ontological version of « On » depends Time by construction. Moreover Definition 23 gets the answer QED

Proposition 26

Conversation between at least two I depends Time and Space

Demonstration

Regarding Proposition 20, the answer si directly obtained QED

Definition 27

$$\begin{aligned} \text{Time : Classical} &\rightarrow \text{Quantum} \\ \ll \text{On} \gg_1 &| \text{---} > \ll \text{On} \gg_2 \end{aligned}$$
Definition 28

$$\begin{aligned} \text{Space : Classical} &\rightarrow \text{Quantum} \\ \ll \text{One} \gg_1 &| \text{---} > \ll \text{One} \gg_2 \end{aligned}$$

Definition 29

Symmetry of Recognition can be invocated if and only if One and On are in relationship

Proposition 30

RES equals RAG if Space and Time exist

Demonstration

Definition 28 allows to notice that Space is a Space in the discourse. But as « One » is a part of « On », a linguistical approach announces an ontological vision if Definition 27 is validated. Moreover, regarding Definition 29, H and C issued from precedent Paper « Theory of RES = RAG in the case of the Black Box of AI can be used because of the link between One and On. We finish the demonstration by Proposition 16. QED
