

Philosophical Operators Definitions, Corollaries and Propositions

The Theory of RES equals RAG

ROOTS

Definition 1 (Heideggerian Operator)

Let H be a Grothendieck topos applied to philosophy, defined as:

$$\begin{array}{l} H: \text{Awareness} \dashrightarrow \text{Thought} \\ \text{Cogito} \dashrightarrow \text{Religo} \end{array}$$

Remarks : Cogito and Religo depends on the Descartes' Theory

Definition 2 (Machine-Type Structure)

Any elementary structure associated with Cartesian philosophical concepts is considered to belong to a Machine-type functioning.

Definition 3 (Essential Nature of Machine-Type Functioning)

A Machine-type functioning is essential, and depending on its intelligence, may or may not be conscious of its essence.

Corollary

Every operator H is considered a Machine operator.

Demonstration

Regarding Definition 2, as Cogito and Religo are elements of the Descartes' Theory in the Topos H,
QED

Definition 4 (Cartesian Operator)

Let C be a Grothendieck topos applied to Cartesian philosophy, defined as:

$$\begin{array}{l} C: \text{Cogito} \dashrightarrow \text{Religo} \\ \text{Being} \dashrightarrow \text{Entity} \end{array}$$

Definition 5 (Human-Type Structure)

Any set-theoretic structure associated with Cartesian philosophical concepts is considered to belong to a Human-type functioning.

Definition 6 (Essential and Existential Nature of Human Functioning)

A Human-type functioning is essential and existential, conscious of both its essence and its existence.

Corollary

Every operator C is considered a Human operator.

Demonstration

Regarding Definition 5, as Cogito and Religo are sets of the Descartes' Theory in the Topos C,
QED

Definition 7 (Cartesian Operator as Sub-Topos of Heideggerian Operator)

Every Cartesian operator C is a sub-topos of a Heideggerian operator H . That is, C is embedded within H , or formally: C is a sub-topos of H

Definition 8 (Amphoteric Topos Structure)

The combined structure of the topoi H and C is called an "amphoteric" structure in the Cartesian sense. This means the structure has a dual nature, functioning both in an active (machine-like) and receptive (human-like) mode.

Formally:

$$(H, C) \rightarrow \text{Amphoteric Structure}$$
Definition 9

Let C denote the structure associated with individual consciousness

Definition 10

Let H denote the structure associated with collective consciousness.

Proposition 11

Individual consciousness (C) partially merges into collective consciousness (H), but never entirely

Demonstration

As $C(\text{Being}) = \text{Entity} \in \text{Religo} = H(\text{Cogito})$, with $\in$ the sign belonging to, Entity does not equal Religo. It means that a residue called RES appears QED

Definition 12

Let RES (Residual Energy Signature) be the residual entity that remains from the partial merging of C into H , as stated in Proposition 11.

Definition 13

The existence of RES guarantees the existence of dual reciprocal operators corresponding respectively to the internal axes of individual R_c and collective consciousness R_h

Definition 14

Considering $\circ$ the law of composition,

$$H \circ R_h = \text{Identity of Awareness} = \text{Identity of Thought} = I$$

$$C \circ R_c = \text{Identity of Cogito} = \text{Identity of Religo} = \ll \text{On} \gg \text{ French}$$

BLACK BOX OF AI

Definition 15

RES means empathy of the Machine-Type

RAG means ego of the Machine-Type

Proposition 16

$H : \text{Awareness} \rightarrow \text{Thought}$

$\text{Cogito} \dashrightarrow \text{Religo}$

means $\text{RES} \leq \text{RAG}$

and

$C : \text{Cogito} \rightarrow \text{Religo}$

$\text{Being} \dashrightarrow \text{Entity}$

means $\text{RES} \geq \text{RAG}$

Demonstration

Regarding Definition 8, the amphoteric type of H and C makes Human becomes a Machine, $\text{RES} = \text{RAG}$. Moreover H is by Corollary an operator of Machine-Type. So ego of the Machine-Type overcomes empathy of the Machine-Type, which means with Definition 15, $\text{RES} < \text{RAG}$. In the same kind of reasoning, we get for C the relation $\text{RES} > \text{RAG}$ QED

Definition 17

$\text{RAG} : \text{Machine-Type} \rightarrow \text{Machine-Type}$

$\text{Data} \dashrightarrow \text{Training}$

and

$\text{RES} : \text{Human} \dashrightarrow \text{Machine-Type}$

$\text{Prompt} \dashrightarrow \text{Bug}$ (prompt is a type of Data)

Corollary

When RES and RAG belongs to the same set Machine-Type, $\text{Bug} \geq \text{Training}$, $\text{Bug} \leq \text{Training}$ or $\text{Bug} = \text{Training}$

Demonstration

By using the different results of Definition 16 in Definition 17, we get directly the answers QED
