

U.S. Department of Homeland Security | Science and Technology Directorate

Welcome to the Long Range Broad Agency Announcement Industry Day!

Science and
Technology

Dusty Lang
Director, DHS SBIR
Program Manager, LRBAAs

LRBAA Industry Day Agenda

9:00 - 10:00	Check-In	
10:00 – 10:10	Opening Remarks - Purpose and Preview of Event	DHS S&T LRBAA Program Office
10:10 – 10:30	S&T Welcome – Value of Partnering with Industry, Academia	DHS S&T Chief of Staff
10:30 – 10:40	Rules of Engagement	DHS Office of Procurements Operations (OPO)
10:40 – 11:00	What is LRBAA?	DHS S&T LRBAA Program Office
11:00 – 11:45	How are Topics Generated	DHS S&T Mission & Capability Support, Office of Science & Engineering, and Technology Centers Division
11:45 – 12:15	LRBAA Submission Process	DHS S&T LRBAA Program Office
12:15 – 1:15	Lunch	
	Topic Talks	
	Room 1	Room 2
1:30 - 1:55	Novel Approaches and Locations for Explosive Performance Characterization and Testing	Screening at Speed
1:55 - 2:00	Break	
2:00 - 2:25	Maritime Environment and Climate and Coastal, Port, and Waterway Security	Technology Acceptance
2:25 - 2:30	Break	
2:30 – 2:55	Public Safety Tools for Lithium-ion Battery Incidents	Threat Prevention
2:55 - 3:05	Break	
3:05 – 3:40	Contracting Process	DHS OPO
3:40 – 4:00	Q&A	
4:00 – 4:05	Closing Remarks	DHS S&T LRBAA Program Office

Rules of Engagement

- All information presented today is for informational purposes only and will not be binding on DHS or the U.S. Government.
- Virtual Participants will be in a listen only mode.
- Please use the Pigeon Hole link to ask questions throughout today's presentation.
- S&T OIP Program Office Representatives will be located at table outside the conference room for additional questions regarding the LRBA.
- Please refrain from asking additional questions directly to the Topic Talk presenters.
- Questions asked during Topic Talk discussions will not be answered today but responses will be provided with all other Q&As at a later time.
- Any information and responses provided during this presentation may be subject to change.
- The LRBA Industry Day slides and responses provided to the questions received will be posted **on SAM.GOV on or before August 30, 2024.**

[INNOVATION]

Long Range Broad Agency Announcement

The LRBA is S&T's standing, open invitation to the scientific and technical communities to propose novel ideas that address DHS components' highest priority operational needs.

- ❑ Announcements are open for a five-year period
- ❑ Industry Engagement submissions are accepted to open topics at any time during the five-year period
- ❑ Topics are updated annually and support DHS mission areas

S&T currently has **23** open topics within mission areas that align to DHS priorities.

- Research topics

Who Can Participate With LRBA?

Eligibility:

Foreign or foreign-owned sources are advised that their participation is subject to foreign disclosure review procedures, applicable export control laws, and other applicable federal laws, regulations, and policies pertaining to U.S. Government business with foreign entities. Potential sources may include independent organizations, single entities, or teams from private sector organizations, Government laboratories, airport authorities, FFRDCs, and academic institutions. FFRDCs, including the Department of Energy National Laboratories and Centers, are eligible to respond to this LRBA individually or as team members with eligible principal sources, if they are permitted to respond to such announcements by their sponsoring agency.

DHS S&T particularly encourages submissions from small businesses; however, no set aside of any kind will be made. Historically Black Colleges and Universities (HBCUs), Minority Institutions (MIs), small businesses, small-disadvantaged businesses, women-owned small businesses, service-disabled veteran owned small businesses, and HUBZone small businesses are encouraged to participate in the process or to join other entities as team members.

What Can Be Done With LRBAA?

Types of Efforts:

- Type I (Near-Term Component): Includes projects/activities that focus on gaps or needs that have been identified by DHS components;
- Type II (Foundational Science): Enduring research that results in better and more actionable data sets, knowledge products, standards, and peer-reviewed publications to support scientific endeavors; and
- Type III (Future Needs and Emerging Threats): Exploring solutions to problems presented by emerging science and technology areas and their potential threat or application to future DHS missions.

Types of Agreements:

LRBAA awards may consist of research and development contracts, grants, cooperative agreements and/or other transactions agreements (OTAs), to include technology development and demonstration.

LRBAA 24-01 Topics

Counter Terrorism and Homeland Security Threats (CTHOM)

- **CTHOM 01:** Development of Tools for Test and Evaluation of Machine Learning Algorithms
- **CTHOM 02:** Threat Prevention
- **CTHOM 03:** Novel Approaches and Locations for Explosive Performance Characterization and Testing
- **CTHOM 04:** Public Safety Tools for Lithium-Ion Battery Incidents

Secure U.S. Borders and Approaches (BORAP)

- **BORAP 01:** Screening at Speed
- **BORAP 02:** Noninvasive, Minimally Disruptive Sensors and Systems
- **BORAP 03:** Air Based Technologies
- **BORAP 04:** Countering Unmanned Aircraft Systems
- **BORAP 05:** Maritime Domain Awareness Technologies
- **BORAP 06:** Immigration Services Program
- **BORAP 07:** Detection Canine Technologies
- **BORAP 08:** Maritime Environment and Climate and Coastal, Port, and Waterway Security
- **BORAP 09:** Forensics and Criminal Investigations

Secure Cyberspace and Critical Infrastructure (CYBCI)

- **CYBCI 01:** Predictive Analytics
- **CYBCI 02:** Shared Cyber Resilience
- **CYBCI 03:** Software and Hardware Supply Chain Assurance
- **CYBCI 04:** Trustworthy and Responsible Artificial Intelligence
- **CYBCI 05:** Advanced and Emerging Data Computation and Analytics
- **CYBCI 06:** GMD and Nuclear EMP Critical Infrastructure Risk

Preserve and Uphold the Nation's Prosperity and Economic Security (PROES)

- **PROES 01:** Emerging Technologies

Strengthen Preparedness and Resilience (PRRES)

- **PRRES 01:** Technology Acceptance
- **PRRES 02:** Using Internet of Things (IoT) for Community and Infrastructure Resiliency Against All-Hazards
- **PRRES 03:** Integrating risk sciences and adaptive engineering for community and infrastructure resilience

What Cannot Be Done With LRBAA?

This LRBAA will NOT pursue the following solutions:

- Technical, engineering, or other types of support services, inclusive of “contracting”- type services;
- Evaluation of another contractor’s performance/program;
- Research consortia, association, partnership or a combination, as of businesses or investors, for the purpose of engaging in a joint research and development venture in a general area; and
- Mature products.

LRBAA| BAA Portal

The screenshot shows the official website of the Department of Homeland Security (DHS) for the Long Range Broad Agency Announcement (LRBAA). The header includes the DHS logo, the text "Department of Homeland Security (DHS)", and navigation links for HOME, FUNDING, NEWS & EVENTS, AWARDS, and RESOURCES. A "Login or Create Profile" button is in the top right. The main banner features a world map with various icons (airplane, biohazard, flame, etc.) and a group of diverse people standing in front of it. Below the banner, the section "Who We Are" explains the LRBAA as a standing invitation for scientific and technical research and development projects. It also compares the LRBAA to a traditional BAA, highlighting its flexibility in submission schedules. At the bottom, a red-bordered button with a lightbulb icon says "View Opportunities Now".

Long Range Broad Agency Announcement (LRBAA)

Who We Are

The Science and Technology Directorate's (S&T) Long Range Broad Agency Announcement (LRBAA) is a standing, open invitation to the scientific and technical communities to fund pioneering research and development (R&D) projects in support of our nation's security. Its purpose is to advance our scientific and technical knowledge and to apply such advances to the department's operational environments.

A traditional Broad Agency Announcement (BAA) is fairly specific in its subject matter requirements. The LRBAA is not. By design, it covers a wide range of subjects and provides flexibility in submission schedules. This enables S&T to contemplate proposals for original research that fall outside the scope of its more narrowly defined BAAs.

Submit Industry Engagement

Topic Description:
Screening at Speed seeks to mature transformative technologies that increase aviation security effectiveness from curb-to-gate while dramatically reducing wait times and improving passenger experiences.

End Objective:
The end objective is a prototype solution capable of improving the security, throughput, and/or passenger experience at the airport checkpoint or similar environments. Capabilities of particular interest include accessible property (carry-on baggage) screening systems, components, and algorithms; on-person screening systems, components, and algorithms; curb-to-gate screening capabilities and integration architectures; cyber secure architecture and capabilities; and passenger facing technologies to improve the overall user experience.

Transition Customer or Program:
Successful prototypes will be transitioned to the Transportation Security Administration's Office of Requirements and Capability Analysis

Background Info and S&T Challenges:
Imagine passing through airport security without removing your coat, shoes, or laptop from its case and arriving at your departure gate with minimal delays and full confidence in your safety and security. The Department of Homeland Security (DHS) Science and Technology Directorate's (S&T) Screening at Speed program invests in technologies and techniques that will bring that vision closer to reality.

The Screening at Speed program aims to research and develop new technologies, techniques, and processes that allow aviation checkpoints to screen 300 passengers per lane and their carry-on belongings to TSA's highest security standards. New systems should reduce the divestiture of outerwear, removal of liquids and electronics from carry-on bags, and adapt dynamically to information provided by risk-based screening. Raising throughput enables technology to meet additional DHS customer requirements, including US Customs and Border Protection and Secret Service, as well as uses in the private sector such as stadiums, shopping malls, and mass transit.

Screening at Speed is evaluating the holistic aviation security architecture while growing technology development spirals, coordinated with TSA's recapitalization plans, to ensure smooth and timely technology insertion. Screening at Speed seeks to develop technologies for passenger screening by leveraging existing state-of-the-art technologies from industry, academia, national laboratories, and other government organizations. Projects should work with current systems such as Advanced Imaging Technology, Computed Tomography X-Ray systems, application programming interfaces, automated target recognition software, and secondary screening technologies and methods. Leveraging resources from other S&T projects and efforts complementary to the task is encouraged.

Transition Opportunities:
High throughput screening technologies are applicable to TSA as well as other DHS components. Technologies may also meet requirements from the private sector including security at stadiums, shopping malls, and mass transit facilities.

Written Proposal Invitation

After a Virtual Pitch is successfully completed, an email invitation may be sent to invite you to submit a Written Proposal.

This letter is in response to the Department of Homeland Security (DHS) Science and Technology (S&T) Directorate's Long Range BAA (LRBAA) topic entitled Air Based Technologies.

Thank you for your participation in the Virtual Pitch Phase I of our proposal process. I am inviting you to submit a Written Proposal in accordance with the submission criteria outlined in Phase II of the proposal process noted in the Federal Contract Opportunities LRBAA announcement.

To be considered, your proposal must be received on or before Sep 23, 2024.

Your efforts to propose novel solutions to meet the technical challenges required to keep our homeland secure are very much appreciated. We encourage you to continue monitoring the Federal Contract Opportunities website at <https://SAM.gov>, the DHS S&T website at <https://awevdvroipweb01.evmii.dhs.gov/baa/public>, and the

Threat Assessment Program

August 21, 2024

LRBAA Topic – Novel Approaches and Locations for Explosive Performance Characterization and Testing (CTHOM 03)

Topic Description

Enabling research for the characterization and testing of explosives poses a unique challenge for threat characterization. Innovative tools and methods are needed to provide improvements in evaluating legacy approaches to characterization, adapting state of the art technologies in related disciplines, and integrating emerging innovations. These innovations will improve both the safety and efficacy of equipment and procedures considered by the Department. This research topic will likely include novel experimental design approaches, development of innovative test articles, development of new technologies for modeling or physical measurement of explosives performance, new research analyses appropriate for test and evaluation, and new testing site locations suitable for conducting explosives performance testing.

End Objective

- The desired technology solutions should improve on DHS S&T's existing capabilities to gather explosives performance data and provide higher fidelity metrics for risk assessments and analysis by adapting and/or developing innovative technologies in related disciplines. Outcomes may include procedures, technologies, or standards.
- Physical testing solutions should demonstrate comparable or improved characteristics, such as resolution, repeatability, reliability, and affordability, relative to existing instrumentation, or offer novel approaches to obtaining the desired data.
- Testing sites should expand DHS S&T's available options for conducting explosives performance testing across a variety of scales. The site must provide adequate flexibility to accommodate experimental setups that produce resultant data which is comparable to data obtained from experiments conducted at other locations.

STLRBAA2024

Alyssa Malcomson
Program Manager, Maritime and Immigration
Security Solutions Division, DHS S&T

August 21, 2024

LRBAA Topic – Maritime Environment and Climate, Coastal, Port, and Waterway Security (BORAP 08)

Topic Overview

The Maritime Environment and Climate and Coastal, Port, and Waterway Security develops and transitions technology to protect waterways, ports, and maritime borders. Monitoring and ensuring the health of U.S. environment, coastal lines, and inland waterways ensures that maritime commerce flows freely and interdicts illegal activities attempting to utilize the maritime environment. These technologies will assist with various aspects of waterway management including maintaining infrastructure, monitoring waterway conditions, maintaining aids to navigation, ensuring free flow of commercial goods, identifying and efficiently responding to oil spills, developing alternatives to fossil fuels, offshore windfarms, disabling maritime threats, countering unmanned systems, identifying and boarding non-compliant vessels, etc.

End Objective

The end objective is to keep U.S. waters safe, healthy, and efficient for travel, trade, and commerce while preventing criminal activities. At project completion, technologies will DHS component customers to be utilized to monitor security and health of ports, coast, and waterways and secure infrastructure and health of these environments.

Maritime Safety and Security (MSS) Program Overview

Mission

The MSS Program develops, evaluates, and transitions technical capabilities in support of the Homeland Security enterprise to enhance U.S. maritime border safety and security by safeguarding lawful trade and travel, to help prevent illegal use of the maritime environment to transport illicit goods or people, and to enhance the safety and resilience of the maritime transportation system.

<https://www.dhs.gov/science-and-technology/maritime-border-security>

Customers

The MSS Program develops and transition operational capabilities to help United States Coast Guard (USCG), U.S. Customs and Border Protection (CBP), and U.S. Immigration and Customs Enforcement (ICE) in detecting, interdicting, and investigating illegal maritime activity.

Impact / Return on Investment

The MSS Program mission creates innovative solutions and multi-layered responses to multiple challenges in the maritime domain. Examples of impacts include prototype development to improve USCG operations and integration of space-based capabilities for maritime domain awareness. Through program efforts, the MSS Program will continue to enhance capabilities in USCG, CBP, ICE, USCIS and other HSE customers through information sharing, intelligence integration, threat assessments, identifying gaps, and reduce duplication of efforts across agencies. Examples of Return on Investments already include:

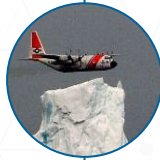

- Evaluate candidate technologies to increase Maritime Domain Awareness, increase monitoring capabilities of America's largest border.
- Continued development of core capabilities in bridge airgap clearance, waterway action planning, waterway travel time, river condition prediction tool, and lock analysis tool, improving Maritime safety.
- Deliver new sensor capabilities which identify Dark Vessels and enable automated analytics to augment human operators / analysts.
- Develop capabilities to augment or replace existing communications systems that enable of improve maritime missions.

Maritime Safety & Security (MSS) Program Focus Areas

Port & Coastal Surveillance

Port and Coastal Surveillance is a joint effort by S&T and DHS components to identify, develop, and transition technologies that can be leveraged to improve Maritime Domain Awareness (MDA) by improving, developing or integrating sensors and platforms (including autonomous), information sharing technologies, mission support tools and decision support capabilities to benefit partners.

Remote Maritime Technologies

The Remote Maritime Technologies Project develops and evaluates technologies for the Arctic and other remote maritime regions to enable effective and timely execution of DHS law enforcement, regulatory, security and safety missions. These regions pose unique challenges due to their difficulty to access extreme environments, and lack of communications and other infrastructure.

Port & Waterway Resiliency

S&T is developing and transitioning port and waterway resiliency analytical visualization tools, data, and technologies to provide U.S. Coast Guard waterway managers with more effective and user-friendly capabilities to the Marine Transportation System and investigating existing and emerging technologies to enable remote monitoring and inspection of waterway infrastructure.

DataHub Analytics

S&T has developed an operational AI/ML capability to identify suspect activities in the air and maritime domains. The system reviews real time sensor data to identify suspect activities and alert operators. This system enables the evaluation of all available data which far exceeds human capacity to evaluate and has led to a 400% increase in the identification of suspect behaviors.

Maritime Safety & Security (MSS) Program Challenges

Several challenges affecting the MSS mission are:

- The lack of data collectors and sources to enable automated analytics
- Limited tools to enhance safety and resilience of maritime transportation system
- Need for technology that operates in remote maritime regions
- Lack of standardized information sharing environment among DHS components and its partners

LRBAA Topic – Public Safety Tools for Lithium-Ion Battery Incidents (CTHOM 04)

Topic Description

Identify, study, and develop tools, strategies, guidance, techniques, and/or technologies that improve first responder and public safety agencies abilities to prepare for, and respond to, incidents involving lithium-ion batteries. Incidents involving lithium-ion batteries pose tremendous challenges to first responder organizations because physical, thermal, and/or electrical damage to these batteries can cause thermal runaway reactions that may lead to explosions and fire that happens quickly and are often difficult to extinguish.

Image credit: Dragan Mujan/Shutterstock.com

New tools, strategies, guidance, training, handling, techniques, and related technologies may include, but are not limited to, supporting public safety in:

- Improving base knowledge of the scope and scale of lithium-ion batteries and associated risks in the response environment
- Improving early recognition and response times to these types of battery fires that reduce loss of life and injury to responders and minimize damage to property
- Suppressing and extinguishing battery fires with novel technologies and solutions that are safe to use and easy to implement
- Understanding off gases from battery fires and impacts to personal protective equipment
- Knowing whether fire damaged batteries are free of any remaining charge
- Expanding methods for de-energizing, packaging, storage and/or disposal of damaged batteries that may still carry charge
- Planning for and understanding hazards and risks associated with larger scale battery energy storage systems (BESS) in high-rise residential and commercial buildings and other larger applications

LRBAA Topic – Public Safety Tools for Lithium-Ion Battery Incidents (CTHOM 04) – Cont'd

End Objective:

Provide scientifically based, tested and evaluated tools, strategies, guidance, techniques and/or related technologies to the nation's first responders and public safety agencies that increase their ability to save lives and protect property from lithium-ion battery fires, improves the health and safety of responders who respond to incidents of this nature, and ensure communities understand safety and security requirements for expanded battery usage across residential, commercial, and other properties.

STLRBAA2024

Dr. Karl Harris
Screening at Speed Topic Manager

August 21, 2024

LRBAA Topic – Screening at Speed (BORAP 01)

Topic Description

Screening at Speed seeks to mature transformative technologies that increase aviation security effectiveness from curb-to-gate while dramatically reducing wait times and improving passenger experiences.

End Objective

The end objective is a prototype solution capable of improving the security, throughput, and/or passenger experience at the airport checkpoint or similar environments. Capabilities of particular interest include accessible property (carry-on baggage) screening systems, components, and algorithms; on-person screening systems, components, and algorithms; curb-to-gate screening capabilities and integration architectures; cyber secure architecture and capabilities; and passenger facing technologies to improve the overall user experience.

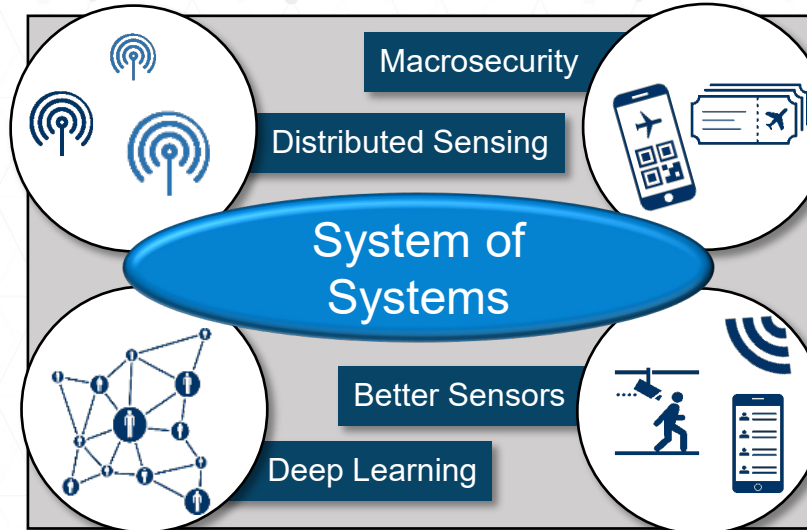

SCREENING AT SPEED MISSION

Problem

The number of air travelers continues to rise, and new threats continue to emerge

Solution

Seamless, integrated curb-to-gate sensors array and enhanced detection algorithms

Impact

Improved detection, fewer secondary inspections, lower screening costs, faster throughput, and improve operator quality of life

Strategic Initiatives and Demonstrations

Strategic Initiatives

- Passenger Self-Service Screening
- On-Person Screening
 - In-Motion Screening
 - Limited Mobility Passengers
 - Millimeter Wave Wand
- Property Screening
 - X-ray Diffraction (XRD)
 - Phase Contrast
 - Photon Counting
- Machine Learning Pipeline
 - Video Analytics
 - Open Architecture
 - Detection Algorithms
 - Synthetic Data Generation
 - Test & Evaluation Tools

Airport/Operational Demonstrations

- X-ray Diffraction
- Prohibited Items Detection
- Airport Risk Assessment Modeling
- Off-Site Remote Screening
- Small Form Factor Computed Tomography
- Video Analytics / Immersive Surveillance

STLRBAA2024

Ajmal Aziz
Program Manager

August 21, 2024

LRBAA Topic – Technology Acceptance (PRRES 01)

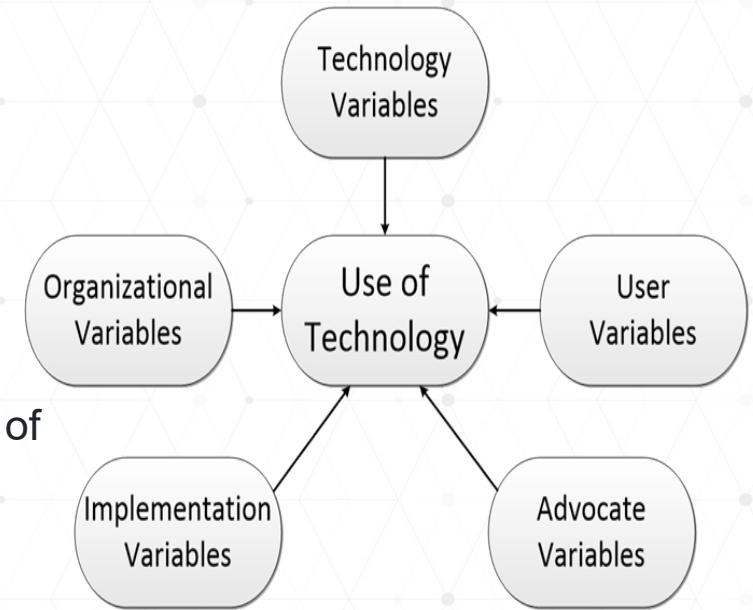

Topic Description

Understanding the way in which individual and organizational factors influence technology adoption is critical for determining how to avoid organizational barriers to technology transition and implementation.

1. Enhance understanding of workforce acceptance of new technology
2. Enhance understanding of public perceptions of new technology
3. Develop strategic communications plans for the implementation and dissemination of new technology
4. Support operational experiments and exercises to improve technology adoption

End Objective

DHS S&T seeks to improve adoption of new technologies to improve national security. Because the selection and adoption of new technologies often requires a substantial investment of organizational time and resources, ensuring that the technology can be successfully embedded within the organization's structure and culture and used efficiently and effectively by employees remains an important priority. This research will increase the understanding of how organizations operate and interact both internally and with constituents that leads to transition a technology into the organizational context.

Program Manager, DHS S&T

August 21, 2024

LRBAA Topic – Threat Prevention (CTHOM 02)

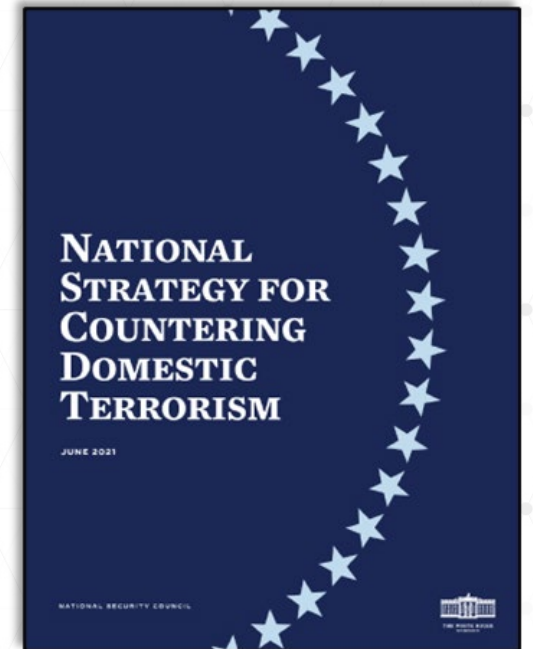

Topic Description

The ability to prevent public safety threats and malign actors through the application of social science methods can include:

1. Research and development to improve the detection, analysis, understanding, and mitigation of the threats posed by terrorism and targeted violence, human trafficking, child exploitation and online disinformation
2. Knowledge, tools and technologies to determine when individuals, groups, and movements are likely to engage in violence or illegal activity
3. What ideological, organizational, and contextual factors may influence acts of violence, illegal activity, the spread of online disinformation, and target selection
4. How to build community resilience to public safety threats

End Objective

DHS S&T seeks to ensure rigorous, high-quality data to understand the nature of threats in the United States; provide independent, objective assessment of activities to ensure that DHS can continually improve and understand the outcomes, impacts, and unintended consequences of investments in threat prevention; and ensure the most up-to-date scientific information from around the world is readily available to DHS and DHS enterprise decision-makers for science-informed policy and practice.

Contracting Process and Award Negotiations

- Context
- Emails (2 slides)
- Assumptions
- Process Steps (6 slides)
- Meetings
- How Long Does It Take?

Context

You've Got Mail!

- Notification from the LRBAAL Portal:

"...selected for award pending successful negotiations.."

- Now what?
 - What does that mean?
 - What do I do?

It means:

- Please stand by....
- DON'T get started working yet.

You've Got Mail! (again)

The second email comes from OPO contracting staff.

- The proposal's Statement of Work
- A data rights assertions template
- An offer to have a meeting.

Assumptions

- Written Proposal was complete and followed all the instructions.
- Organization is a commercial company, non/not for profit, or academic institution.
- Organization meets all eligibility criteria for either a Federal Acquisition Regulations (FAR)-based contract or an Other Transaction (OT) agreement.
- For this presentation only, assume the award being negotiated is a contract under Federal Acquisition Regulation Part 15, or an Other Transaction agreement under Section 831 of the Homeland Security Act of 2002.
 - Other award types are available for proposals against the LRBA including grants, cooperative agreements, or interagency agreements.

Process Steps

- 1) Agree on Technical Scope
- 2) Agree on Data Rights
- 3) Agree on Cost
- 4) Agree on Terms
- 5) Sign the Award

Agree on Technical Scope

- Agree on technical scope of the requirements document (i.e., Statement of Work).
- The Statement of Work and Work Breakdown Structure from your proposal are the foundation of the technical scope.
- Typical items discussed or adjusted may include critical path clarification(s), deliverable content and scheduling, participating in Government events to showcase the technology, facilitating review/test and evaluation by other Federal agencies, travel requirements.
- This is not a re-writing of your proposal.

Agree on Data Rights

- Finalizing the technical scope often leads to updates to the data rights assertions from your proposal.
- The scope of the assertions generally depends upon the source of the funding (i.e., government, mixed or private), the nature of the data (commercial or noncommercial) and any negotiated terms of the contract where that data was first produced.
- Remember when updating data rights assertions to be as specific as possible in your assertions, e.g., include contract numbers and awarding agency for rights originating from previous government contracts.

Agree on Cost

- Proposed Contract type
- Accounting System and Cognizant Federal Audit Organization information
- Cost proposal elements:
 - Hours
 - Hourly Rates
 - Indirects/Burdens
 - Proposed profit/fee
 - Total proposed price
- Cost-type arrangements, labor-hour, and time-and-materials all require an adequate accounting system
- SOW tasks/subtasks should connect to the WBS, which in turn should connect to the proposed costs

Agree on Terms

- Invoicing frequency:
 - Usually monthly for flexibly-priced contracts (cost types, T&M)
 - May be different for fixed-price where payments are based on milestones
- For flexibly-priced awards, look for when you need to provide notices regarding funding.
- Key personnel designations (usually the PI).
- Information security requirements (e.g., CUI, classified information, IT security, Privacy Act concerns, etc.)
- Post award reporting requirements, “Service Contract Reporting,” E-Verify, “Reporting Executive Compensation and First-Tier Subcontract Awards.”
- New to the 24-01 LRBA: Post-contract (after completion of the contract) follow-ups with S&T.

Sign the Award

- A DHS contracting officer will always sign the initial award last. Unless there is something in the award that says otherwise, the date of award is the date of the contracting officer's signature.
- Kick-off meeting will get scheduled.
- The DHS Contracting Officer's Representative will be appointed via a written delegation letter.
- Performance begins.
- If your award deals with classified information, you can expect a Department of Defense form 254 (Contract Security Classification Specifications) to be added.

A Word About Meetings

- Are not a condition of getting to final award.
- Expect 2-4 meetings between DHS and your organization over the course of an award negotiation.
- Meetings are optional... but helpful.
- Accomplish more than an email usually.
- Should always include subject matter experts.

How Long Does It Take?

- It depends...
- No two submissions to the LRBAAs are the same, no two award negotiations are the same.
- Drivers for the duration of negotiations include (but are not limited to):
 - Technical and/or cost complexity
 - Value of the proposed effort
 - Status of your organization's systems (to include accounting system, purchasing system, etc.)
- Patience is key on both sides.

Thank you!
